[Start Assignment](#)

- Due Monday by 11:59pm
- Points 20
- Submitting a file upload
- Available until Oct 6 at 11:59pm

Goal

This assignment will have you write programs for two of the most basic types of sequences: lists and strings. You will be writing programs using hierarchical (trees) and/or linked-list structures on the next assignment.

Instructions

Write and upload the following two separate programs:

Part 1: Driver's License Exam

The local driver's license office has asked you to create an application that grades the written portion of the driver's license exam. The exam has 20 multiple-choice questions. Here are the correct answers:

Sample Output

1. A	6. B	11. A	16. C
2. C	7. C	12. D	17. B
3. A	8. A	13. C	18. B
4. A	9. C	14. A	19. D
5. D	10. B	15. D	20. A

Your program, named in the form `lastname_firstname_license.py`, must store these correct answers in a list. The program must then prompt the student to enter their answers to each of the twenty questions and store the answers in another list.

After the student's answers have been entered, the program will display a message indicating whether the student passed or failed the exam. (A student must correctly answer 15 of the 20 questions to pass the exam.) Your program will then display the total number of correctly answered questions, the total number of incorrectly answered questions, and a list showing the question numbers of the incorrectly answered questions.

The following are examples of the output from two separate runs of this program:

```
>>> %Run estrada_license.py
Number of correct answers: 6
Number of incorrect answers: 14
You did not pass the test.
Questions answered incorrectly: 3, 4, 6, 7, 10, 12, 13, 14, 15, 16, 17, 18, 19, 20

>>> %Run estrada_license.py
Number of correct answers: 16
Number of incorrect answers: 4
You passed the test.
Questions answered incorrectly: 2, 7, 11, 15
>>>
```

Part 2: Pig Latin

Write a program that accepts a sentence as input and converts each word to “Pig Latin.” To convert a word to Pig Latin:

- If the word begins with a vowel, add “way” at the end of the word.
- Otherwise, move all the consonants from the beginning of the word to the end, and append “ay” to the string.

For the purposes of this program, a, e, i, o, u, and y are all considered as vowels. You may convert the output to all lower case and ignore all punctuation (other than spaces). Here are some examples of input and output:

- Python is a programming language → ythonpay isway away ogrammingpray anguagelay
- Your strong ox plows the field → yourway ongstray oxway owsplay ethay ieldfay

Your program will repeatedly request user input and convert it to Pig Latin until the user just presses ENTER (with no text) to quit.

Save the source code week6Lab.py Take the all screenshot and save in to Microsoft word file name Wk46abScreenshot.doc

Upload the above source code and test program source files and Wk6LabScreenshot.doc)

Grading

- This assignment is worth 20 points and will be graded using the attached grading rubric.
- This assignment is due on October 12.

When You Finish

Upload your programs to Canvas.

Sequences

Criteria	Ratings		Pts
Correct answers are in list	1 pts Yes	0 pts No	1 pts
Displays pass/no-pass correctly	2 pts Full Marks	0 pts No Marks	2 pts
Total correct answers	2 pts Full Marks	0 pts No Marks	2 pts
Total incorrect answers	1 pts Full Marks	0 pts No Marks	1 pts
Create list of incorrect answers	2 pts Full Marks	0 pts No Marks	2 pts
Comments at top of Pig Latin program	1 pts Full Marks	0 pts No Marks	1 pts
Handles vowel as first letter properly	3 pts Full Marks - Adds "way" properly	0 pts No Marks	3 pts
Starting consonants	3 pts Full Marks - Handles any number of consonants	0 pts No Marks	3 pts
Entry of Sentences	2 pts Full Marks	0 pts No Marks	2 pts
Processing sentence	2 pts Full Marks	0 pts No Marks	2 pts
Output	1 pts Full Marks	0 pts No Marks	1 pts
Total Points: 20
